

Studio Financials

ERP built for the rebar industry

Design. Fabricate. Build.

About Studio Financials

aSa.Studio Financials is a collection of software modules designed to handle rebar-specific tasks that out-of-the-box business software can't. By seamlessly integrating your business processes with estimating, detailing, and production, aSa gives you the tools to efficiently manage every aspect of your projects, from start to finish.

Studio Financials is an umbrella covering several business-related aSa software tools. (See the list below.) Purchase modules individually, or save money with our Studio Financials bundles.

Helping you work smarter

Flexible to Meet Your Needs

- ✔ Purchase specific Financials modules or go with our pre-configured bundles to save money.
- ✔ Built-in interface to our recommended accounting package, Microsoft Dynamics Business Central.
- ✔ aSa.Studio APIs to connect to your preferred accounting or ERP system.

Standard Financials Bundle

- ✔ Accounts Receivable
 - Invoicing
 - Progress Billing
 - Cash Receipts
- ✔ Project Management
 - Contract Management
 - Change Orders
 - Project Pricing

- ✔ Sales Order
- ✔ Shipping Ticket
- ✔ Inventory Management
- ✔ Interface to Microsoft Business Central General Ledger
- ✔ Shipping Ticket Signature App

Advanced Financials Bundle

- ✔ Everything in the Standard bundle, plus the following advanced tools
- ✔ Multi-currency
- ✔ Message center
- ✔ Document management
- ✔ API Bundle - read data from, and write data to, the aSa database

Experience these key benefits

Rely on a truly integrated system

Relieving inventory and tracking contract progress happen automatically based on engineering and production processes.

See the big picture

With aSa reports and dashboards, you'll have a clear picture of where you stand with every project. For example, see the weight and value of material you have estimated, detailed, shipped, and invoiced to date.

Connect to third-party tools

Studio Financials integrates with ERP and back-end accounting systems. We recommend and support Microsoft Business Central, but our APIs let us work with many others, too.

Use tools built specifically for the reinforcing industry

The program tracks approved and unapproved change orders, automates progress billings, and performs numerous other rebar-specific tasks.

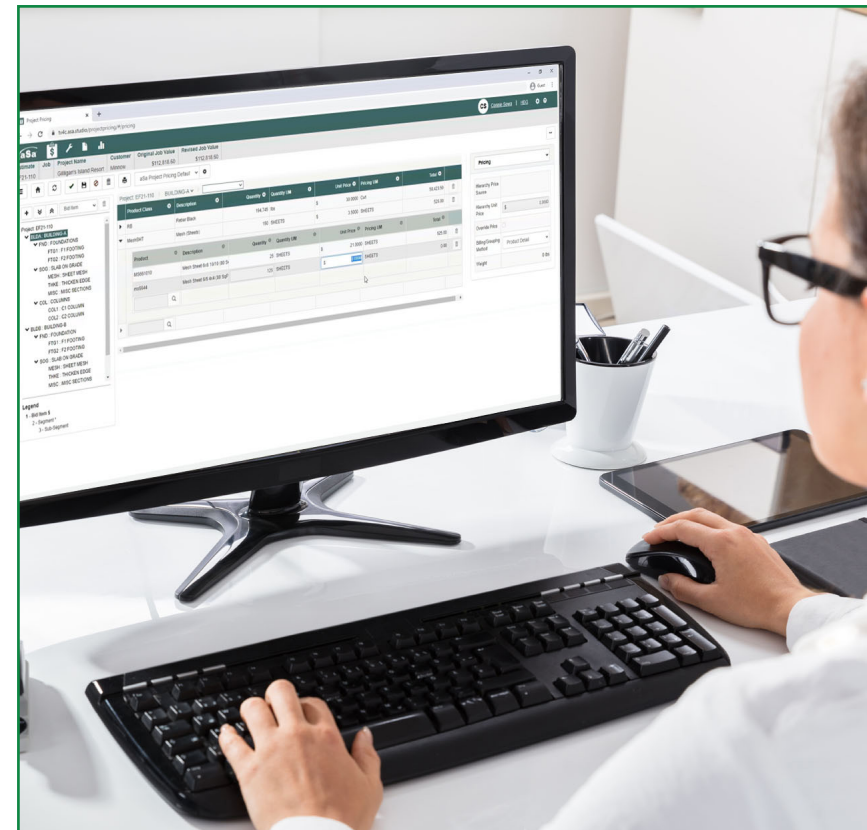

Manage the inventory you supply

Inventory applications are specifically designed to handle rebar, including automatic conversions among pieces, lengths, weights, and hundred-weight values. The system also handles mesh and other concrete reinforcing supplies.

Develop and track job values easily

aSa auto-generates bid values by applying your pricing to aSa Estimate weight totals. When you win the job, the bid becomes your base contract value.

Throughout Studio Financials modules, the system can be as quick and simple – or as powerful and automated – as you need it to be.

For example, you can price and report on an entire project as a unit, or you can organize the project into a multi-level tree by bid item, segment, or any other unit you want to use.

Additionally, you can enter item prices on the sales order and invoice, or you can have the program calculate pricing based on pre-defined values, discounts, and other variables configured for your operation.

aSa.Studio

cloud software suite

About aSa

aSa is a world-leading provider of software for reinforcing steel, construction, and precast industries. We have been developing innovative solutions and providing personal service to our customers since our very first product was developed in 1969.
